Compliance with EU Directives

This product complies with the following EU Directives and can be used in the European Union without any restrictions.

Electro Magnetic Compatibility (EMC) directive 2014/30/EU

- Low voltage directive (LVD) 2014/35/EU
- Restriction of Hazardous Substances (RoHS) 2011/65/EU

The full text of the EU declaration of conformity (DoC) is available at the following internet address https://enphase.com/en-za/installers/resources/ documentation/microinverters

Manufacturer:

Enphase Energy Inc., 47281 Bayside Pkwy., Fremont, CA, 94538, The United States of America, PH: +1 (707) 763-4784

Importer Europe:

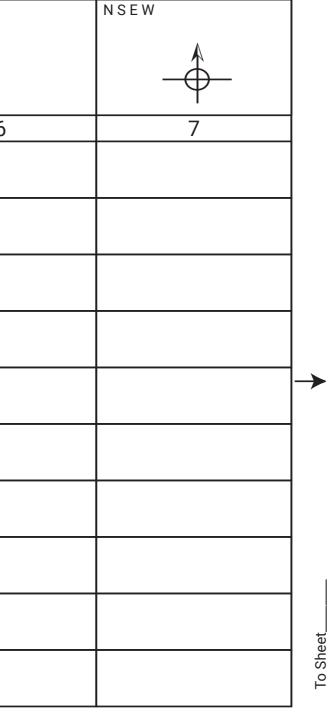

Enphase Energy NL B.V., Het Zuiderkruis 65, 5215MV, 's-Hertogenbosch, The Netherlands, PH: +31 73 3035859

Importer Australia:

Enphase Energy Aust. Pty/Ltd., 88 Market St., South Melbourne VIC 3205. PH : +61 3 86691679

Previous releases					

Install IQ8 Series Microinverters with integrated MC4 connectors

To install IQ8 Series Microinverters, read and follow all warnings and instructions in this guide and in the IQ8 Series Microinverters Installation and Operation Manual at: https://enphase.com/en-za/installers/resources/documentation/microinverters. Safety warnings are listed on the back page of this guide.

IMPORTANT: The IQ8 Series Microinverters include both AC and DC connectors integrated into the bulkhead. The AC port connects to IQ Cable or Enphase Field Wireable connector. The DC port has been evaluated by TUV for intermateability with Stäubli made MC4 connectors, whose cable coupler models are "PV-KST4/...-UR, PV-KBT4/...-UR, PV-KBT4-EVO2/...-UR, and PV-KST4-EVO2/...-UR". The DC port of the inverter must be mated with Stäubli made MC4 connectors.

The microinverter has a Class II double-insulated rating, which includes ground fault protection (GFP). To support GFP, use only PV modules equipped with DC cables labeled PV wire or PV cable. Refer to local electrical codes and standards for grounding requirements of PV array and racking.

IQ8 Series Microinverters require the IQ Cable. An IQ Gateway is required to monitor performance of the IQ8 Series Microinverters.

NOTE: 1) After you log in to your Enphase account from Enphase Installer App, scan the microinverter serial numbers (standard 1D bar code) and connect to the IQ Gateway to track the system installation progress. Please ensure you are using the latest version of Enphase Installer App 3.28 (3.28.0 and above). 2) Installer must check the manufacturing date of the products to ensure that the installation date is within one year of the manufactured date of the products. Contact your local distributor to validate the date code.

PREPARATION

A) Download the Enphase Installer App and open it to log in to your Enphase Installer Portal account. With this app, scan microinverter serial numbers (standard 1D bar code) and connect to the IQ Gateway to track system installation progress. To download, go to https://enphase.com/ installers/apps or scan the below QR code:

Android iOS

B) Refer to the following table and check PV module compatibility at: ZA: https://enphase.com/en-za/installers/microinverters/calculator You can check the intermateable cable coupler models of Stäubli made MC4 connectors at: <u>https://enphase.com/en-za/support/staubli-mc4</u>

Model	DC connector	PV module* cell count
IQ8MC-72-M-INT** IQ8AC-72-M-INT*** IQ8HC-72-M-INT	Stäubli MC4	Pair with 54-cell/108 half-cell, 60-cell/120 half-cell, 66-cell/132 half-cell, or 72- cell/144 half-cell

* IO8 Series Microinverters are compatible with bi-facial PV modules if the temperature adjusted electrical parameters (maximum power, voltage and current) of the modules, considering the electrical parameters including the Bifacial gain, are within the allowable microinverter input parameters range. I evaluating the amount of Bifacial gain, follow the recommendations of the module manufacturers. ** IQ8MC is not available for ANZ, South Africa and India. *** IQ8AC is not available for South Africa and India.

- C) In addition to the PV modules, racking and Enphase microinverters you will need these Enphase items:
- · An IQ Gateway (model ENV-S-EM-230 or ENV-S-WM-230 or ENV-S-WB-230) is required to monitor solar production and required to propagate a grid profile to the microinverters

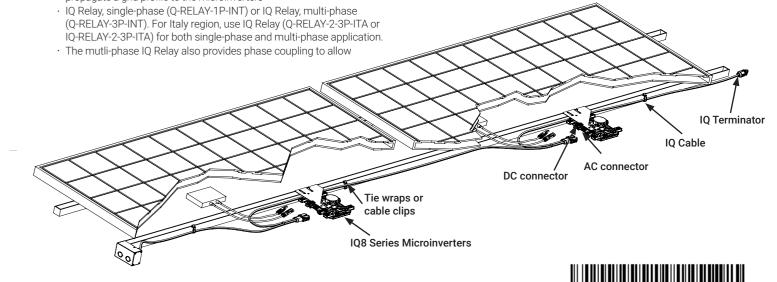

microinverters on all phases to communicate with the IQ Gateway. Use a Phase Coupler (LPC-01) for multi-phase system for phase coupling if IQ Relay is not installed in the multi-phase system. **NOTE**: In Germany only, for PV systems greater than 30 kVA, an off-the-shelf DIN VDE V 0124-100 compliant central protection relay must be added to the system.

- · IQ RAW cable (single-phase: Q-25-RAW-300), (Multi-phase: Q-25-RAW-3P-300)
- Tie wraps or cable clips (ET-CLIP-100 works with both multi-phase and single-phase cable)
- · IQ Sealing Caps (Q-SEAL-10): for any unused connectors on the IQ Cable
- · IQ Terminator (Q-TERM-R-10 for single-phase or Q-TERM-3P-10 for multi-phase): typically 1 terminator (end-feeding branch circuit) or 2 terminators (centre-feeding branch circuit) required per branch circuit
- · IQ Disconnect Tool (Q-DISC-3P-10)
- · IQ Cable for single-phase or multi-phase:

Cable model	Connector spacing*	PV module orientation	Connectors per box
Single-phase			
Q-25-10-240	1.3 m	Portrait (all)	240
Q-25-17-240	2.0 m	Landscape (60-cell)	240
Q-25-20-200 2.3 m		Landscape (72-cell)	200
Multi-phase		·	
Q-25-10-3P-200	1.3 m	Portrait (all)	200
Q-25-17-3P-160	2.0 m	Landscape (60-cell)	160
Q-25-20-3P-160	2.3 m	Landscape (72-cell)	160

140-00251-07

* Allows for 30 cm of cable slack.

D) Check that you have these other items:

An AC junction box or AC isolator

- Tools: screwdrivers, wire cutter, voltmeter, torque wrench, sockets, and wrenches for mounting hardware
- Use crimp tool Multi-Contact PV-CZM-18100, -19100, or -22100 for single-phase Field Wireable connector
- Screwdriver blade width 4 mm to 3.2 mm (1/8") (recommended tool to torque the screw on contact carrier and to disconnect multi-phase Field Wireable connector)
- Optional: Field Wireable connectors (Q-CONN-R-10M and Q-CONN-R-10F for single-phase IQ Cable or Q-CONN-3P-10M and Q-CONN-3P-10F for multi-phase IO Cable)
- E) Protect your system with lightning and/or surge suppression devices. It is also important to have insurance that protects against lightning and electrical surges
- F) Plan your AC branch circuits to meet the following limits for maximum number of microinverters per circuit.

Maximum* IQ8 Series Microinverters per AC branch circ				
Breaker	IQ8MC***	IQ8AC****	IQ8HC	
20A Single-phase	11	10	9	
20A Multi-phase	33 (11 per phase)	30 (10 per phase)	27 (9 per phase)	
25A Multi-phase**	39 (13 per phase)	36 (12 per phase)	36 (12 per phase)	

* Refer to local regulations for OCPD sizing and to define the number of microinverters per branch in your area

** This breaker option is not available in Europe

*** IO8MC is not available for AN7 and India.

**** IQ8AC is not available for India.

G) Size the AC conductor to account for voltage rise. Select the correct conductor size based on the distance from the last microinverter in the circuit to the breaker in the electrical panel/ AC switch board. Refer to the Voltage Rise Technical Brief ANZ: Single-phase and Multi-phase for details.

Best practice: Centre-feed the branch to minimise voltage rise.

INSTALLATION Position the IQ Cable

- A) Plan each cable section to allow connectors on the IQ Cable to align with each PV module. Allow extra length for slack, cable turns, and any obstructions.
- B) Mark the approximate centers of each PV module on the PV racking.
- C) Lay out the cabling along the installed racking for the AC branch circuit.
- D) Cut each section of cable to meet your planned needs.

WARNING: When transitioning between rows, secure the cable to the rail to prevent cable or connector damage. Do not put the connectors at the microinverter under tension.

2 Position the Junction Box/AC Isolator

A) Verify that AC voltage at the site is within range:

Microinverter models:	Single-phase service			
	L1 to N	184 to 276 VAC*		
IO8MC-72-M-INT	Multi-phase service			
IQ8AC-72-M-INT	L1 to L2 to L3	319 to 478 VAC*		
IQ8HC-72-M-INT	L1, L2, L3 to N	184 to 276 VAC*		

* Nominal voltage range can be extended beyond nominal if required by the utility.

- B) Install a junction box/AC isolator at a suitable location.
- C) Provide an AC connection from the junction box/AC isolator back to the electricity network connection using equipment and practices as required by local jurisdictions.
- D) For three phase installations, verify the IQ Cable wiring colour codes are correctly terminated: L1-Brown, L2-Black, L3-Grey, N-Blue.

3 Mount the microinverters

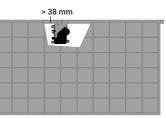

- A) The microinverters can be mounted beneath the modules either horizontal or vertical orientation to the module and must be mandatorily protected from direct exposure to rain, UV, and other harmful weather events. Please refer below image for clearance requirements during vertical mounting.
- B) Mount the microinverter horizontally bracket side up or vertical. Always place it under the PV module, protected from direct exposure to rain, sun, and other harmful weather events. Allow a minimum of 1.9 cm (3/4") between the roof and the microinverter. Also allow 1.3 cm (1/2") between the back of the PV module and the top of the microinverter.

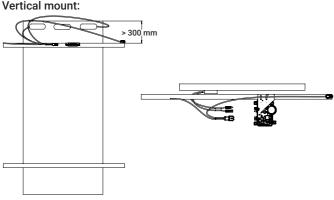

For vertical mount also maintain >300 mm (12") clearance from the edges of the PV module to protect the microinverter from direct exposure to rain, UV, and other harmful weather events.

VARNING: Install the microinverter under the PV module to avoid direct exposure to rain, UV, and other harmful weather events. Do not mount the microinverter upside down.

- C) Torque the mounting fasteners as follows. Do not over torque.
- 6 mm mounting hardware: 5 N m
- 8 mm mounting hardware: 9 N m
- When using mounting hardware, use the manufacturer's recommended torque value

Horizontal mount:

4 Create an installation map

Create a paper installation map to record microinverter serial numbers and position in the array.

- A) Peel the removable serial number label from each microinverter and affix it to the respective location on the paper installation map.
- B) Peel the label from the IQ Gateway and affix it to the installation map.

Cable clip

C) Always keep a copy of the installation map for your records.

5 Manage the cabling

- A) Use cable clips or tie wraps to attach the cable to the racking. The cable must be supported at least every 30 cm.
- B) Dress any excess cable in loops so that it does not contact the roof. Do not form loops smaller than 12 cm in diameter.

- A) Connect the microinverter. Listen for a click as the connectors engage
- B) Cover any unused connectors on the IQ Cable with Sealing Caps. Listen for a click as the sealing caps engage.

WARNING: Install sealing caps on all unused AC connectors as these connectors become live when the system is energised. aling caps are required for protection against moisture ingress

To remove a sealing cap or AC connector, you must use an IQ disconnect tool.

7 Terminate the unused end of the cable

Single-phase IQ Cable	Multi-phase IQ Cable
A) Remove 13 mm of the cable sheath from the conductors. Use the terminator body loop to measure.	A) Remove 20 mm of the cable sheath from the conductors.
B) Slide the hex nut	B) Slide the hex nut
onto the cable. The	onto the cable. The

C) Insert the cable into	C) Insert the cable into
the terminator body so	the terminator body so
that the two wires land	that the four wires land
on opposite sides of	on separate sides of
the internal separator.	the internal separator.
D) Insert a screwdriver into the slot on the top of the terminator to hold it in place. Hold the terminator body stationary with the screwdriver and turn only the hex nut to prevent the conductors from twisting out of the separator. Torque the nut to 7.0 N m.	D) Bend the wires down into the recesses of the terminator body and trim as needed. Place the cap over the terminator body. Insert a screwdriver into the slot on the terminator cap to hold it in place. Rotate the hex nut with your hand or a wrench until the latching mechanism meets the base Do not over torque.
E) Attach the terminated cable end	E) Attach the terminated cable en-
to the PV racking with a cable clip	to the PV racking with a cable clip
or tie wrap so that the cable and	or tie wrap so that the cable and
terminator do not touch the roof.	terminator do not contact the roof

8 Complete installation of the junction box/AC isolator

A) Connect the IO Cable into the junction box/AC isolator.

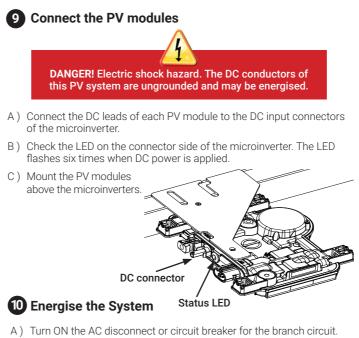

WARNING: To prevent irreversible damage to the system onfirm colour codes at connections before energising the AC Supply. Failure to comply voids the warranty

B) Note that IQ Cable uses the following wiring colour code:

Single-phase	Multi-phase
Brown – L1 Blue - N	Brown – L1 Black – L2
	Grey – L3 Blue - N

NOTE: Multi-phase IQ Cable internally rotates L1, L2, and L3 to provide balanced 400VAC (multi-phase), thus alternating phases between microinverters.

NOTE: Minimise the number of unused multi-phase IQ Cable connectors with multi-phase systems. When cable connectors are left unused on a multi-phase system, it creates a phase imbalance on the branch circuit. If multiple cable connectors are skipped over multiple branch circuits, the imbalance can multiply.

B) Turn ON the main utility-grid AC circuit breaker. Your system will ramp up to full producing power after grid profile propagation and device provisioning is completed. It may take 20-30 minutes for full power production based on number of microinverters in the system.

C.) Check the LED on the connector side of the microinverter

LED	Indicates
Flashing green	Normal operation. AC grid function is normal and there is communication with the IQ Gateway. IQ8 Sereis Microinverter's LED will be Flashing green only after provisioning
Flashing orange	The AC grid is normal but there is no communication with the IQ Gateway.
Flashing red	The AC grid is either not present or not within specification.
Solid red	There is an active "DC Resistance Low, Power Off" condition. To reset, refer to the <i>IQ Gateway Installation and Operation</i> <i>Manual</i> at: <u>https://enphase.com/en-za/installers/resources/</u> <u>documentation/microinverters</u> . If problem persists, measure resistance between PV+ to EARTH and then PV- to EARTH on PV module and then inverter. Anything less than ~7 kΩ will trigger "DC Resistance Low, Power Off" condition. Usually the value is in MΩ on inverter or PV module. Swap out faulty PV module or microinverter.

ACTIVATE MONITORING AND SELECT GRID PROFILE

After you have installed the microinverters, follow the procedures in the IQ Gateway Quick Install Guide to activate system monitoring, set up grid management functions, and complete the installation.

- · Connect the IQ Gateway, detect devices, and select grid profile
- Connect to Enphase Installer Platform, register the system, and build the virtual array

IO Cal	IQ Cable safety				
A	DANGER : Risk of electric shock. Do not install the IQ Cable terminator while power is connected.				
A	DANGER: Risk of electric shock. Risk of fire. When stripping the sheath from the IQ Cable, make sure the conductors are not damaged. If the exposed wires are damaged, the system may not function properly.				
	DANGER: Risk of electric shock. Risk of fire. Do not leave AC connectors on the IQ Cable uncovered for an extended period. You must cover any unused connector with a sealing cap.				
	WARNING: Use the terminator only once. If you open the terminator following installation, the latching mechanism is destroyed. Do not reuse the terminator. If the latching mechanism is defective, do not use the terminator. Do not circumvent or manipulate the latching mechanism.				
\triangle	WARNING : When installing the IQ Cable, secure any loose cable to minimise tripping hazard				
\checkmark	NOTE : When looping the IQ Cable, do not form loops smaller than 12 cm in diameter.				
\checkmark	NOTE : If you need to remove a sealing cap, you must use the Enphase disconnect tool.				
\checkmark	 NOTE: When installing the IQ Cable and accessories, adhere to the following: Do not expose the terminator or cable connections to directed, pressurised liquid (water jets, etc.). Do not expose the terminator or cable connections to continuous immersion. Do not expose the terminator or cable connections to continuous immersion. Do not expose the terminator or cable connections to continuous immersion. Do not expose the terminator or cable connections to continuous immersion. Do not expose the terminator or cable connections to continuous tension (e.g., tension due to pulling or bending the cable near the connectors and cables provided. Do not allow contamination or debris or moisture in the connectors. Use the terminator and cable connections only when all parts are present and intact. Do not allow the terminator to come into contact with open flame. Fit the terminator using only the prescribed tools and in the prescribed manner. Use the terminator using only the prescribed tools and in the prescribed manner. 				
DC Ca	ble safety				
\checkmark	NOTE : Ensure proper routing of PV module DC cable using the clips to prevent the leads from resting on the roof. Do not wrap excess DC Cable around microinverter.				
\checkmark	NOTE: Avoid direct exposure to sunlight.				
\checkmark	NOTE: Avoid sharp edges on racking.				
\checkmark	NOTE : Avoid cable contacting rough surfaces or moving parts within racking system.				

NOTE: Avoid overly tight bending radii. Minimum bend radii for the DC Cable is 8 X Cable Outer Diameter. NOTE: Avoid overly tightly sized cable clips \checkmark for routing.

Note for third-party products:

requirements of the local electrical authorities should make adjustments

Any third-party manufacturer or importer product(s)used to install or commission Enphase product(s) shall comply with the applicable EU Directive(s) and requirements in the FFA (Furopean Economic Area). It is the responsibility of the installer to confirm that all such products are labelled correctly and have the required compliant supporting documéntation
